SUMMARY

Java backend developer with hands-on experience building secure, scalable REST APIs using Spring Boot, Spring Security, and MongoDB. Proficient in layered architecture design, CRUD operations, third-party API integration, and asynchronous programming with `CompletableFuture`. Developed three end-to-end backend projects from scratch, demonstrating strong understanding of authentication, authorization, and clean backend design. Seeking a software engineering role where I can contribute to building robust backend systems.

TECHNICAL SKILLS

Languages: Java, Python

Frameworks & Libraries: Spring Boot, Spring Security, Spring Data MongoDB, Maven

Databases: MongoDB, SQL

Concepts: REST API Design, CRUD Operations, Layered Architecture, Authentication & Authorization, Asynchronous Programming (`CompletableFuture`), Role-Based Access Control (RBAC), Exception Handling

Developer Tools: Git, GitHub, VS Code, IntelliJ IDEA, Postman

PROJECTS

GitHub Repository Access Report API | *Java, Spring Boot, GitHub REST API, CompletableFuture, Maven* March 2026

- Built a Spring Boot service integrating with the GitHub REST API to generate organization-wide repository access reports, mapping users to their accessible repositories.
- Implemented asynchronous data fetching using **`CompletableFuture`** to parallelize API calls across multiple repositories, significantly reducing report generation time.
- Designed a layered architecture (Controller → Service → Client → DTO) with robust error handling for restricted repositories, ensuring fault-tolerant operation. [GitHub Repository](#)

Task Management API | *Java, Spring Boot, Spring Security, MongoDB, Spring Data MongoDB* January 2026

- Developed a RESTful backend system enabling authenticated users to create, update, delete, and track tasks with due dates and status tracking.
- Implemented user authentication and **role-based access control (RBAC)** using Spring Security, ensuring users can only manage their own tasks.
- Modeled User and Task entities in MongoDB and implemented all CRUD operations via Spring Data MongoDB, following clean repository and service layer separation. [GitHub Repository](#)

Journal API | *Java, Spring Boot, Spring Security, MongoDB, Maven* June 2025

- Built a secure REST API for personal journal management, enabling authenticated users to create, read, update, and delete their own entries with strict user-level data isolation.
- Integrated **Spring Security** for user registration, login, and session-based authentication, ensuring no user can access another user's journal entries.
- Designed a clean four-layer architecture (Controller → Service → Repository → Security) with MongoDB as the data store, keeping business logic and data access concerns fully separated. [GitHub Repository](#)

EDUCATION

ABES Engineering College (AKTU)	Ghaziabad, UP
<i>B.Tech. in Computer Science — Artificial Intelligence & Machine Learning CGPA: 8.12</i>	2022 – 2026
Dehradun Public School (CBSE)	Ghaziabad, UP
<i>Senior Secondary (Class XII) 81.2%</i>	2022
Dehradun Public School (CBSE)	Ghaziabad, UP
<i>Secondary (Class X) 82.2%</i>	2020

CERTIFICATIONS

Techno-Entrepreneurship Program — IHFC, IIT Delhi & Jet Aerospace, IIT Delhi Sonipat Campus

Python for Data Science, AI and Development — IBM, authorized via Coursera

Intermediate Level Problem Solving — HackerRank

Basic Level Problem Solving — HackerRank
